## PROFILE

---

Fresh graduate from a vocational high school (SMK) with expertise as a Fullstack Developer, focusing on web and mobile application development. Experienced in building various systems using Laravel, Next.js, Flutter, and PostgreSQL in school projects, industry internships, and freelance work. Adaptable to new technologies and team environments, with a strong focus on system security, application performance, and optimal user experience.

## EDUCATION

---

### SMK Negeri 4 Kota Bogor

Software Engineering and Game Development (PPLG)

Jun 2022 – May 2025

## WORK EXPERIENCE

---

### PT Bonet Utama – Bogor, Indonesia

Full-stack Developer Intern

Jan 2025 – Apr 2025

- SMK PUI Website – Improved Laravel-based CMS admin, handled 12+ problematic CRUD tables. Optimized AJAX fetching and cleaned legacy code for better stability.
- Webview Pindai – Developed a Flutter-based Android app for a PWA attendance system. Fully responsible for development and added security to detect fake GPS and rooted devices.
- SageSolution Website – Rebuilt the company profile website using Next.js (frontend 100%) and enhanced the Laravel CMS backend (55%). Responsible for image CRUD fix, form validation, and Golang API integration (78%).
- RTIK Website – Developed the RTIK Indonesia portal using Next.js (frontend, 60%) and Laravel CMS admin (backend, 25%).

## FREELANCE EXPERIENCE

---

Freelance Web Developer

Oct 2024 – Present

- Ujikom Website Services – Built over 18 Ujikom websites using Laravel with multi-role systems, ensuring smooth usability for exam participants.
- Company Profile BBIA – Developed a company profile website using Laravel, Bootstrap, Filament, and MySQL. Created 13 landing pages and admin dashboard.
- Kominfo Attendance System – Built a GPS-based attendance system using Laravel, MySQL, and TailwindCSS. Includes real-time check-ins, work agreements, leave requests, and admin dashboard.
- Kantah Book Expedition System – Created a land certificate expedition system for the Land Office of Bogor using Laravel and MySQL. Features automatic status updates, document uploads, statistical charts, PDF/Excel exports, and audit trail.

- Disdukcapil Queue System – Developed an online queuing system using Laravel and Blade Bootstrap, covering schedule booking, QR Code validation, and service management.

## ACADEMIC PROJECTS

---

- Payment App (Dicoding Training) – Designed a responsive and user-friendly payment UI using Flutter. Received a 5-star rating from Dicoding for visual quality.
- School Gallery (Ujikom Project) – Developed a school gallery app using Flutter (mobile) and Laravel (website + API). Built multi-role CRUD features for both platforms, deployed to Ubuntu Server using FileZilla.
- Hotel Website (Bonet Training Collaboration) – Created a hotel reservation and room management system using Laravel (API), Next.js (frontend), and MySQL database.
